

Engineering Division Course Syllabus

Course Title **Computer System Programming**

Course Number **ENGR-AD 202**

Course Description: This course introduces students to the concepts of computer system programming language. A low-level programming language is used to illustrate the course topics, which may be C/C++ or a similar programming language. The topics covered include basic if statements, loops, functions, arrays, strings, arrays, pointers, recursion, C++ class and objects, C++ class overloading and class template, C++ inheritance and polymorphism and C++ Files and Streams.

Credits 2

Prerequisite Courses Recommended: CS-AD 101 Introduction to Computer Science

Instructor Information

Instructor(s) Prof. Yi Fang

Contact Information: CSE Office: 2021
Email: yfang@nyu.edu
Phone: 056-3190302

Intended Learning Outcomes:

Students will gain basic understanding of the concepts of variables, functions, arrays, pointers, reference and C++ Object Oriented Programming. They will be able to develop proficiency in solving basic problems in computer programming and will be able to apply the knowledge of computer programming language for analyzing and modeling engineering problems using appropriate method with realistic constraints. The following learning outcomes are anticipated upon completion of this course. Students will be able to:

- Describe and discuss the fundamental programming concepts [(b3)]
 Develop an understanding of basic data structures [(b3)]
 Develop an understanding of C++ object oriented programming [(b3)]
 Develop an understanding of basic algorithms and efficient ways to implement them[(c2), (d1),(e3)]
 Develop debugging and trouble-shooting skills [(d1),(e3)]

Course Materials

Textbook: Programming: Principles and Practice using C++, by Bjarne Stroustrup, Addison-Wesley

Teaching and Learning Methodologies: Students are expected to arrive at class with an understanding of the basic definitions, concepts, and applications of relevant topics. Class time will be devoted to in-depth discussions of course topics. Homework assignments are dedicated for reinforcing course topics via solving representative problem sets and holding class discussions.

Assignments and Grades: Grades will be based on three computer programming assignments, midterm exam (paper and computer based) and comprehensive Final exam (paper and computer based). The distribution of grades is subject to some revision at the discretion of the instructor. Typical weighting values are given below:

Projects	30%
Mid-term Exam	30%
Final Exam	40%
Total	100%

Course Schedule: A typical schedule for course topics, projects, and exam dates is given in the table below.

Week	Lecture Topics	Project	Exam Schedule
1	1. Introduction to computer systems 2. Basics for computer programming 2.1 Data Types and Variables 2.2 Operators 2.3 Data input and output 2.4 Statements and flow control		
2	3. Functions 3.1 Defining a Function 3.2 Call a Function 3.3 Inline Function	Project 1	
3	3. Functions 3.4 Recursive Function 3.5 Overloading Function 3.6 Function templates		
4	4. Arrays, Strings and Pointers 4.1 Arrays 4.2 Strings 4.3 Pointers	Project 2	Midterm Exam
5	5. C++ Object Oriented Programming 5.1 Classes and Objects 5.2 C++ Class Overloading 5.3 C++ Class Template		
6	5. C++ Object Oriented Programming 5.4 Inheritance 5.5 Polymorphism	Project 3	
7	6. C++ Files and Streams		Final Exam

Course Structure

7 weeks course, 2 lectures per week (75 minutes each) + 155 minutes lab per week, 2 hours final exam is after the 7th week.

Relationship to Outcomes:

	Shared Engineering Outcomes					Program Specific Criteria				
	(1)	(2)	(3)	(4)	(5)	CivE	CmpE	ElecE	MechE	GenE
Lectures		x			x		X			x
Labs		x			x		x			x

	Student Learning Outcomes												
	(a)	(b)	(c)	(d)	(e)	(f)	(g)	(h)	(i)	(j)	(k)	(l)	(m)
Lectures		x	x										
Labs		x	x	x	x								

Shared Engineering Outcomes:

- (1) Apply techniques in the practice of leadership and innovation [(l), (m)];
- (2) Identify social, economic, ethical and other factors that shape engineering solutions and incorporate them in conjunction with engineering principles in problem solving and designing systems, components, or processes to meet desired needs within realistic constraints [(a), (c), (e), (f), (h)];
- (3) Recognize and respond respectfully to cultural concerns and differences when solving problems both physical and ethical [(a), (e), (f), (h)];
- (4) Exhibit guidance and organizational effectiveness in multidisciplinary teams as a participant and a leader [(d), (l)];
- (5) Demonstrate competence in writing and speaking effectively, and in communicating significant technical information in a clear and concise manner [(g)].

Program Specific Criteria:

- > CivE: Civil Engineering graduates will be able to work professionally in four of the technical areas of the civil engineering discipline (structural, geotechnical, transportation, and environmental), design systems, components, and processes in more than one civil engineering context, and apply the principles of project management.
- > CompE: Computer Engineering graduates will be able to analyze and design complex computing and network devices and systems containing hardware and software components.
- > ElecE: Electrical Engineering graduates will be able to analyze and design complex electrical, electronic, and communication devices and systems.
- > MechE: Mechanical Engineering graduates will be able to analyze and design systems, components, and processes, and work professionally in both thermal and mechanical systems areas.
- > GenE: General Engineering graduates will be able to analyze and design devices and systems in an interdisciplinary engineering area related to: Biomedical and Health Systems; Information, Communication, and Electronic Systems; or Urban Systems.

Student Learning Outcomes:

(a) an ability to apply knowledge of mathematics, science, and engineering;

(b) an ability to design and conduct experiments, as well as to analyze and interpret data;

(c) an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability;

(d) an ability to function on multidisciplinary teams;

(e) an ability to identify, formulate, and solve engineering problems;

(f) an understanding of professional and ethical responsibility;

(g) an ability to communicate effectively;

(h) the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context;

(g) a recognition of the need for, and an ability to engage in life-long learning;

(j) a knowledge of contemporary issues;

(k) an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice;

(l) an ability to apply leadership skills including risk and project management and decision making;

(m) an ability to apply innovation skills.

Assessment Plan for ENGR-AD 202: Computer System Programming

Performance Indicators	Assessment Tools				
	Home-work	Project	Lab Reports	Midterm Test	Final Exam
(b.3) Analyze and interpret data related to engineering experiments. <i>Analyze and interpret data from various engineering applications, for example, 2D image data that help student using computer programming model real problems</i>		X			X
(c.2) Design a component to meet desired needs within realistic constraints. <i>Apply C++ class object oriented programming principles and procedure to take a list of specifications and design a class and algorithm while meeting memory and time complexity requirements</i>		X			
(d.1) Fulfill individual duties. <i>Deliver lab projects by the deadline.</i>		X			
(e.3) Demonstrate the ability to solve engineering problems using appropriate methods. <i>Demonstrate ability to implement an algorithm to find a complete solutions of a well-defined engineering problems, for example, comparing similarity between a pair of images</i>		X			X
CompE: Criteria satisfied by outcomes above and degree curricular requirements.					
GenE: Criteria satisfied by outcomes above and degree curricular requirements.
